

13th COFRESKO FORUM ROUND TABLE

HOUSEHOLD PACKAGING FOR A CIRCULAR ECONOMY

WEDNESDAY 15 SEPTEMBER 2021

Cofresco, Minden, Germany

Ladies and gentlemen,

New recycling rate targets for packaging are creating new requirements for household food packaging. In addition to the primary task of avoiding food waste through proper storage and packaging, the main focus is now shifting to the integration of food packaging into the circular economy.

This year's Cofresco Forum Round Table will therefore be addressing the question of **how the requirements of a circular economy for food packaging can be implemented in the household**. International researchers and companies will be presenting relating **current research** and inviting the audience to an open discussion: Which requirements must **recyclates** meet for use in food packaging? What is the status of **aluminium and paper recycling**? What are the developments in **renewable packaging materials**? How can material flows be better recycled and what would be an **optimal treatment process**? What role does design play with regard to **expanding material cycles**? As part of a subsequent guided discussion, you can then take a closer look at **Cofresco's technical centre and gain an insight into the research work being carried out in Minden when it comes to the packaging of various food items**.

Finally, you are cordially invited to join our informal get-together and exchange views (and contact details) with speakers and other participants.

Further information on the 13th Cofresco Forum Round Table is provided on our website https://www.cofresco.de/cofresco_forum_en,1900.html where you can also register. The registration deadline is 1 September 2021 and, as always, participation is free of charge.

We look forward to welcoming you!

With best regards,

Martin Rogall
Chief Sustainability Officer, Cofresco Europe
